OBJECTIVE   To apply my research skills in industry by developing practical AI solutions for business.

RESEARCH INTERESTS   Data Science, Machine Learning, Text Mining, AI for Business, Cybercrime

EMPLOYMENT

IBM Research – Australia

- Postdoctoral Research Scientist. Cognitive Analytics.   Jun 2016 – Current
  - Manager: Dr. Christopher J. Butler
  - Developed end-to-end machine learning solutions for internal business units, from concept to production ready packages.
  - Developed techniques for chunking documents and generating learning objectives. Work recognised as division led expertise and a publication is under review.
  - Transitioned and improved past research components for business teams, introducing a new machine learning component and validation experiments, simplifying and parallelizing execution pipelines, and standardizing APIs for access with JARs and RESTful services.
  - Academic style research work included geolocation of Twitter tweets, detecting vandalism on Wikipedia, and predicting the price of an item.
  - Publications: [3], [15]

Australian Federal Government

- Data Scientist. Research and Development Team.   May 2015 – Jun 2016
  - Developed modelling, profiling, and text analytics solutions in R and SQL.
  - Translated analysts' observations and business knowledge into code, producing data visualizations and reports.

Australian National University

- Research Assistant & Co-founder. Cybercrime Observatory. Mar 2013 – May 2015
  - Supervisors & Co-founders: Dr. Mamoun Alazab, Prof. Roderic Broadhurst
  - Projects: Investigating Malicious Spam Emails, History of Cybercrime Activities
  - Developed a novel detection technique for malicious content (attachments or URLs) using only email text.
  - Publication: [7].

- Research Assistant. Research School of Computer Science.   Jan 2011 – May 2015
  - Supervisors: Prof. Peter Christen, Dr. Scott Sanner, Dr. Lexing Xie
  - Project: Detecting Abnormal Text Values
    * Researched techniques to automatically detect abnormal text values from large databases using only the distribution of text data within those databases.
  - Project: New Objective Functions for Social Collaborative Filtering
    * Developed a Facebook app to collect participants' data and recommend content from our novel collaborative filtering algorithms.
  - Project: Synthetic Data Generation and Corruption
    * Developed a user interface for a novel synthetic data generation method that mimics real-world errors through a variety of data corruption methods.
  - Publications: [1], [4], [16]
